PROJECT EXPERIENCE

Liftoff Project — Bluetooth Parental Safety App

- Currently developing Android App from scratch.
- Allows user to build a database of playlists of videos and music to then send wirelessly to another device as a form of parental control and viewing ease.
- New technologies : Android Studio, Spring Android, Bluetooth, Material Design

LC101 Projects — Python, Java

- Python - Coded encryption programs
- Python - Learned basics of coding: assigning variables, data types, defining functions, for loops, while loops, if/else statements, comparisons, booleans, strings, tuples, dictionaries and sets.
- Java - TechJobs(Console, MVC, OOP) coded a browsable and searchable database in different frameworks
- Java - CheeseMVC (Persistent) coded an application to add ORM functionality by using Spring Data, HashMaps, ArrayLists.
